

Authentication - Registration / Login Flow

Architecture

Process

API

1. Registration API

Endpoint: `POST /api/register`

Request Body:

```
{
  "name": "string",
  "email": "string",
  "password": "string",
  "isParent": "boolean"
}
```

Response:

- **201 Created:** When registration is successful.
- **400 Bad Request:** If the input data is incorrect.

2. Login API

Endpoint: `POST /api/login`

Request Body:

```
{
  "email": "string",
  "password": "string"
}
```

Response:

- **200 OK:** Returns user session info.
- **401 Unauthorized:** If credentials are incorrect.

3. Invite Child API

Endpoint: `POST /api/invite`

Request Body:

```
{
  "parentEmail": "string",
  "childEmail": "string"
}
```

Response:

- **200 OK:** When invite is sent successfully.
- **400 Bad Request:** If the email format is incorrect.

4. Child Registration API

Endpoint: `POST /api/register-child`

Request Body:

```
{  
  "name": "string",  
  "email": "string",  
  "password": "string",  
  "inviteToken": "string"  
}
```

Response:

- **201 Created:** When child registration is successful.
- **400 Bad Request:** If the input data is incorrect or the invite token is invalid.
